Dieharder

- 250 MB of data
- test corresponding to original Diehard (except for Diehard sums test)
- each test run once, length of the stream decided by test
- displayed number of tests passed out of total (pass=1, weak=0.5, fail=0)

STS NIST

- same source files as for Dieharder
- each test run 100 times on 1 000 000 bits
- some runs had problems with tests RandomExcursions and RandomExcursionsVariant, these tests are not included in the result when their run was not errorless

EACirc

- displayed average stable generation across 30 independent runs (stable = fitness over 99% for at least next 50 test sets)
- if none stable generation was found, average average maximum fitness after test vector change is displayed in parentheses.
